from the rifle after it was found on Main Street. Now this bullet here, these are the two portions of the bullet uh uh taken from Dr. King's body. Now uh due to the mutilation of the bullet, uh the FBI would not say definitely that this bullet was fired from this gun. They would go so far as to say that it had the same lands and grooves, it had the same twist, but they want more to go on than that. They say that that this is the type of bullet which comes from this type of shell casing and that and that uh that the lands and grooves and twists on this on this nose of the bullet (?), are the same as the barrel of the gun. Now this is a lead-nosed bullet which hit Dr. King. These, there were lead-nosed bullets found in this in this cartridge box in the suitcase. There were also
